INTRODUCTION

Welcome and thank you for choosing a dock seal/shelter from KELLEY®.

This Installation Manual contains information that you need to safely install, operate and maintain the dock seal/shelter. Please keep and read this Installation Manual before installing and using your new dock seal/shelter.

SAFETY SIGNAL WORDS

You may find safety signal words such as DANGER, WARNING, CAUTION, or NOTICE throughout this Installation Manual. Their use is explained below:

⚠️ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible death or injury.

⚠️ DANGER Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ WARNING Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ CAUTION Indicates a potentially hazardous situation which, if not avoided may result in minor or moderate injury.

⚠️ NOTICE Notice is used to address practices not related to personal injury.
SAFETY PRACTICES

⚠️ WARNING ⚠️

Read these safety practices before installing, operating or servicing the DSH®. Failure to follow these safety practices could result in death or serious injury.

READ AND FOLLOW THE OPERATING INSTRUCTIONS IN THIS MANUAL BEFORE OPERATING THE DSH® If you do not understand the instructions, ask your supervisor to assist you or contact the factory.

Be certain to follow the instructions in this manual.

NOTICE

KELLEY DSH series are custom built for each application. Installation procedures are the same for all DSH Series, regardless of size. Installation requires two people and a forklift truck or similar device to lift and position the pads.

Improper installation of anchoring devices or installation into aged or unsound concrete or other faulty or inadequate building wall construction could result in serious injury or death, as well as premature product wear, product failure, or property damage.

Inadequate lifting equipment or unsafe practices can cause a load to fall unexpectedly. Make sure lifting devices are in good condition and have a rated capacity of at least 500 lbs. at the lifting angle that they are being used. Never allow anyone to stand on or near the dock seal/shelter component when it is lifted or placed. Failure to follow this warning can allow the dock seal to fall, tip or swing into people causing serious injury or death. Safety standards as described in this installation manual must be followed at all times. If you have any questions, contact your supervisor or your local Kelley distributor for assistance.

Assembly of components should be performed in such a way so as to maintain cleanliness of equipment before final installation. Lifting equipment to be determined by installer (man lift and forklift or boom lift are typical). Wear safety glasses, gloves, hard hats, safety shoes and all necessary protective clothing.

PREPARATION

Remove all of the contents from the containers and check for damage. If any of the contents show signs of damage, contact your local sales representative.
