Do not install, operate or service this product unless you have read and understand the Safety Practices, Warnings, Installation and Operating Instructions contained in this User’s Manual. Failure to do so could result in death or serious injury.
INTRODUCTION

Welcome and thank you for choosing this truck leveler.

This User’s Manual contains information that you need to safely install, operate and maintain the truck leveler. It also contains a complete parts list and information about ordering replacement parts. Please keep and read this User’s Manual before using your new light system.

SAFETY SIGNAL WORDS

You may find safety signal words such as DANGER, WARNING, CAUTION or NOTICE throughout this Owner’s Manual. Their use is explained below:

⚠️ This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible death or injury.

⚠️ **DANGER**

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

⚠️ **WARNING**

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

⚠️ **CAUTION**

Indicates a potentially hazardous situation which, if not avoided may result in minor or moderate injury.

⚠️ **NOTICE**

Notice is used to address practices not related to personal injury.
**SAFETY PRACTICES**

**WARNING**

*Read these safety practices before installing, operating or servicing the wheel restraint. Failure to follow these safety practices could result in death or serious injury.*

If you do not understand the instructions, ask your supervisor to explain them to you or call your local distributor.

**OPERATION**

Use restricted to trained operators.

Use by untrained people can cause property damage, bodily injury and/or death. Your supervisor should teach you the safe and proper way to use the truck leveler. Read and follow the complete OPERATION PROCEDURE on page 8 before use. **DO NOT USE THE TRUCK LEVELER IF IT IS NOT WORKING RIGHT.** Tell your supervisor it needs repair.

Keep hands and feet clear of the truck leveler at all times. Stay clear of the truck leveler when it is moving.

**BE CERTAIN TO RESTRAIN VEHICLE USING WHEEL CHOCKS OR OTHER SUITABLE VEHICLE RESTRAINT BEFORE ANY LOADING OR UNLOADING.**

Before chocking wheels or engaging vehicle restraint, dump air from air ride suspensions and set parking brakes.

**INSTALLATION, MAINTENANCE AND SERVICE**

Before doing maintenance or service be certain that the power is disconnected and properly tagged or locked out. Failure to follow these safety practices may result in death or serious injury.

**BE CERTAIN TO MANUALLY CHOCK THE VEHICLE WHEELS BEFORE LOADING OR UNLOADING.**

Place barricades around pit on dock floor and drive while installing, maintaining or repairing truck leveler.

Do not stand in the driveway between the dock and a backing vehicle.

Do not use the truck leveler as a step.

Keep hands and feet clear of moving parts at all times.

All electrical troubleshooting and repair must be done by a qualified technician and meet all applicable codes.

Disconnect the power and properly tag or lock off before doing any electrical work.

If it is necessary to make troubleshooting checks inside the control box with the power on, **USE EXTREME CAUTION!** Do not place fingers or uninsulated tools inside the control box. Touching wires or other parts inside the control box could result in electrical shock, death or serious injury.
INSTALLATION

FOR UNITS SHIPPED IN 2 SECTIONS
(SKIP TO PAGE 7 FOR UNITS SHIPPED IN 1 PIECE)

1. Fit the deck sections together. Insert the hinge angle between the deck hinges. Grease the hinge rod and feed through the aligned hinge tubes. See Fig. 1.

2. Insert roll pins through the end hinge tubes. Remove the four inner lifting lugs as shown. See Fig. 2.
3. On the hinge end of the decks, ensure the deck plates are firmly in contact and level. Continuously weld the hinge end skirt together. (Uphill weld only on vertical welds. Do not use downhill welds.) Continuously weld the top of deck plates together 24" from the forward (hinge end) edge. Install deck strapping plate with 4" long bolts and washer. See Fig. 3.

4. On the cylinder end of the deck, ensure the deck plates are fit together, firmly in contact and level. Position the mating skirt against the deck skirt. Continuously weld the top and sides of the mating skirt to the deck skirt. (Uphill weld only on vertical welds. Do not use downhill welds.) Continuously weld the top of deck plates together 24" from the edge. Install deck strapping plate with 4" long bolts and washer. See Fig. 4.

5. Carefully turn the unit over. Ensure the deck plate is firmly in contact with the center beam. Weld the center beam to the deck plate, deck header and deck skirt as shown. See Fig. 5.
6. Position the mating skirt against the deck header. Weld the top and sides of the mating skirt to the deck header. Uphill welds only, do not use downhill welds. See Fig. 6.

7. Position the cylinder plate as shown. Continuously weld each side of the cylinder plate to each beam and each cylinder enclosure. See Fig. 6.

8. Position the reinforcement plate as shown. Continuously weld each side of the reinforcement plate to each beam. Touch up paint as required. See Fig. 7.

9. Carefully turn the unit over. Ensure the deck plates are firmly in contact and level. Weld the deck plates together. Touch up paint as required. Remove the deck strapping plates. See Fig. 8.
PIT MOUNTED INSTALLATION

**WARNING**

*Before installation read and follow all safety practices shown on page 3 and the operation section of the manual.*

*Improper installation of the truck leveler could result in death or serious injury to dock workers or other users of the truck leveler.*

*Place barricades around pit on dock floor and drive while installing, maintaining or repairing truck leveler.*

*Be certain bystanders in the driveway stand clear when truck leveler is operated.*

1. Before installing truck leveler, use the certified pit drawings to check the entire pit for correct dimensions and conduit locations.

2. If your unit was shipped in one piece, grease hinge rod and feed through hinge tubes on deck and rear hinge angle. Insert roll pins through end hinge tubes.

3. Weld the four hinge angle support plates (supplied) to the 8" channel at front of pit. See Fig. 9.

4. Disconnect the #6 hose linking the two lift cylinders and feed through conduit running laterally across pit.

**NOTICE**

*Whenever running any hoses through conduit, the end of the hose must be capped in order to prevent dirt and other debris from entering the hydraulic system.*

4. Feed length of #8 hose (supplied) through conduit from power unit location to truck leveler pit.

5. Position power unit and anchor to floor.

6. Attach #8 hose to power unit.

7. Remove cylinder shipping bolts from both cylinder base brackets.

8. Place a chain or other suitable lifting device through the lugs located at the four corners of the deck. The lifting lugs have been provided for the purpose of lifting during installation. The truck leveler should not be lifted in any other manner when placing into position. See Fig. 10.
Make sure lifting devices are in good condition and have a lifting capacity of at least 15,000 lb. at the lifting angle they are being used at. Stand clear of the truck leveler when it is being placed into position. Never allow anyone to stand on or near the truck leveler when it is being lifted or placed into position. The truck leveler can tip or swing into bystanders causing severe injury and/or death.

9. Lift the entire unit into the pit. Square deck with pit sides, shimming behind hinge angle where necessary. Hinge angle should rest on top of support plates welded in step 2. Weld behind each stationary hinge segment to 8" channel. See Fig. 11.

10. Manually extend each lifting cylinder until the base bracket contacts the pit floor. Ensure lifting cylinder is plumb when truck leveler is at level grade. Anchor cylinder base brackets in position with 5/8" x 4-1/2" wedge anchors.

11. Attach #8 lift hose to fitting at base of large lift cylinder. Attach #6 hose to lift cylinders. See Fig. 12.

12. Attach control panel to wall adjacent the dock opening on the left side facing out from inside the dock at approximately 5' from the ground to center of control panel. Check incoming power for correct voltage and run power to control panel through a fused disconnect supplied by others. Wire from control panel to power unit per wiring diagram on page 16. Apply power to control panel.

13. Perform lift cylinder synchronization procedure. See Fig. 12 and procedure on page 9.

14. Reverse the motor rotation (if necessary) as follows:

14.1 Disconnect power.

14.2 Reverse the motor wiring by switching any two of the three motor wires connected to the overload relay: T1, T2, and T3.

14.3 Reapply power.

15. Anchor outside guardrails with 3/8" x 3" wedge anchors.
LIFT CYLINDER SYNCHRONIZATION

The two main lifting cylinders are synchronized before they leave the factory. It should only be necessary to re-synchronize them if the #6 hose connecting them is disconnected allowing air to enter the line. This hose should only be disconnected if it is required to run it through conduit as in a pit mounted truck leveler installation.

PROCEDURE

1. Remove any load from the truck leveler
2. Remove the lift cylinder cover plates.
3. Open the needle valve on the larger cylinder (3" diameter rod) by first loosening the Allen key set screw and then turning the knurled knob counter-clockwise two turns.
4. Depress the RAISE button to raise the truck leveler to its highest position.
5. Purge any air from the smaller “slave” cylinder (4" diameter rod) by slowly loosening the bleeder screw at the top of the cylinder housing until only oil escapes. Tighten the bleeder screw.
6. Raise the truck leveler to its highest position. Close the needle valve by turning clockwise until tight and then tighten lock screws.
7. Replace the lift cylinder cover plates.
SURFACE MOUNTED INSTALLATION

1. Position power unit and anchor to floor.

2. Place a chain or other suitable lifting device through the lugs located at the four corners of the deck. The lifting lugs have been provided for the purpose of lifting during installation. The truck leveler should not be lifted in any other manner when placing into position. See Fig. 10.

**WARNING**

Make sure lifting devices are in good condition and have a lifting capacity of at least 15,000 lb. at the lifting angle they are being used at. Stand clear of the truck leveler when it is being placed into position. Never allow anyone to stand on or near the truck leveler when it is being lifted or placed into position. The truck leveler can tip or swing into bystanders causing severe injury and/or death.

3. Set the unit in place, centered to the dock door and 4" out from the bumper face. See Fig. 13.

4. Block up the lift cylinder end of the deck to facilitate attachment of ramp assembly at other end of deck.

5. Grease hinge rod and feed through hinge tubes on deck and ramp. Insert roll pins through end hinge tubes.

6. Anchor ramp assembly in place with 5/8" x 4-1/2" spike anchors.

7. Place the #6 hose linking the two cylinders on ground between deck and building wall.

8. Attach #8 hose to power unit. Feed through conduit to master lift cylinder location on deck assembly.
Dirt or debris in the hydraulic system can hamper proper operation of the truck leveler. Do not allow dirt or debris to enter the hoses.

9. Connect #8 hose to fitting at base of large lift cylinder.

10. Attach control panel to wall adjacent the dock opening on the left side facing out from inside the dock at approximately 5' from the ground to center of control panel. Check incoming power for correct voltage and run power to control panel through a fused disconnect supplied by others. Wire from control panel to power unit per wiring diagram on page 16. Apply power to control panel.

11. Extend the lifting cylinders by depressing the RAISE button (standard panel) until the base brackets contact the slab. Ensure lifting cylinders are plumb when truck leveler is level. Anchor cylinder base brackets in position with 5/8" x 4-1/2" wedge anchors.

12. Reverse the motor rotation (if necessary) as follows:

   12.1 Disconnect power.

   12.2 Reverse the motor wiring by switching any two of the three motor wires connected to the overload relay: T1, T2, and T3.

   12.3 Reapply power.

13. Position hose guard assembly over top of hydraulic hose between leveler and building. Anchor to slab with 5/8" x 4-1/2" wedge anchors.

14. Anchor outside guardrails with 3/8" x 3" wedge anchors such that access is denied between the cylinder and dock.
OPERATING INSTRUCTIONS

OPERATING INSTRUCTIONS
(FOR STANDARD CONTROL PANELS)

WARNING
Before operating Truck leveler read and follow all safety practices listed on page 3.

Do not use the Truck Leveler if it looks broken or does not seem to work right.

Inform your supervisor immediately.

Stay clear of the Truck Leveler when it is moving.

Keep hands and feet clear at all times.

Do not operate the Truck Leveler with equipment, material, or people directly in its path.

Before raising vehicle, it MUST be properly restrained with a suitable vehicle restraint system.

Failure to follow these safety practices may result in serious injury or death

TO RAISE VEHICLE:

1. Before raising vehicle, it MUST be properly restrained with a suitable vehicle restraint system.

2. Once vehicle is safely chocked, it may be raised by pressing and holding the “RAISE” button until the vehicle bed is at the desired height.

3. Vehicle may now be loaded or unloaded

TO LOWER VEHICLE:

1. Press the lower pushbutton until the Truck Leveler is fully lowered

2. Remove vehicle restraint

3. Vehicle may now leave the loading area
TROUBLESHOOTING

**DANGER**

Before doing any maintenance or service remove power at the fused disconnect during all electrical or mechanical service. Disconnect must be properly locked out during maintenance or service of equipment. Failure to disconnect power may result in serious injury or death.

**WARNING**

Before doing any maintenance or repair read and follow the safety practices listed on page 3 and the operations section of this manual.

Place barricades on the dock floor around the truck leveler and in the driveway in front of the equipment while installing, maintaining or repairing the truck leveler.

**NOTE:**

This troubleshooting section assumes that the truck leveler has been installed properly and that all electrical and hydraulic connections have been made correctly. If this is a new installation or electrical or hydraulic work has been done on the unit, refer to the appropriate schematics and/or instructions to verify that the unit is installed correctly.

RAMP WILL NOT LIFT (when RAISE button is pressed)

1. **MOTOR RUNS**
   1.1 Too much weight on ramp
   1.2 Ramp already at maximum height
   1.3 Pressure relief valve set too low - factory set at 2800 PSI
   1.4 Leaking or broken hose connection
   1.5 Failed pump or pump/motor coupling

2. **MOTOR DOES NOT RUN**
   2.1 Overload has been tripped
   2.2 Other electrical problem - consult appropriate schematic

3. **RAMP WILL NOT LOWER** (when LOWER button is pressed)
   3.1 Ramp is already in the fully lowered position
   3.2 Defective lowering solenoid valve or coil. Replace
   3.3 Obstruction underneath ramp preventing downward travel. Remove obstruction
   3.4 Velocity fuse(s) in lift cylinders tripped. Reset velocity fuses by pressing raise button to lift ramp slightly
   3.5 Other electrical problem - consult appropriate schematic

4. **RAMP RAISES UNEVENLY**
   4.1 Lift cylinders not synchronized. Follow synchronizing procedure described on page 9.
   4.2 Leak or break in #6 hose connecting the two lifting cylinders. Repair or replace
SPECIFICATIONS

PLANNED MAINTENANCE

⚠️ DANGER
Be certain, before doing any maintenance or repair on the equipment, that the power is disconnected and properly tagged or locked off.

⚠️ WARNING
Before servicing the truck leveler, read and follow the Safety Practices on page 3 and the operation section of this manual.

Place barricades on the dock floor around the truck leveler and in the driveway in front of the equipment while installing, maintaining or repairing the truck leveler.

WEEKLY
1. Check for leaks on the hydraulic power unit.
2. Check for damaged hydraulic fittings.
3. Check that pins and pin locks are in place.
4. Clean hydraulic cylinders, ramp hinge assembly, hydraulic hoses and truck leveler pit to remove debris.

MONTHLY
1. Check for damaged hinge tubes on ramp hinge assembly.
2. Check for cuts in hoses and loose or leaking fittings.
3. Adjust hydraulics to maintain level deck (if required).
4. Lubricate ramp hinge assembly.

QUARTERLY
1. Grease fitting on spherical bearing at bottom of lift cylinders.
2. Visually inspect labels and replace if worn or missing.
3. Check level and condition of hydraulic fluid.

ANNUALLY
1. Drain, flush and change oil. Use only oils specified.
2. Remove and clean hydraulic oil pump strainer and reservoir.

Hydraulic Fluid - An all weather hydraulic fluid with a viscosity of 15 CSt at 40°C (100°F), such as:
Shell Tellus T 15
Mobil Aero HFA (49011)

TRUCK LEVELER
OPERATING INSTRUCTIONS

To raise truck:
1) Before raising truck, MUST be properly connected with a suitable truck restraints system.
2) Once the truck is safely restrained, it may be raised by pressing and holding the "RAISE" button until the truck deck is at the desired height.
3) Truck may now be raised or lowered.
4) To lower truck:
5) Press and hold the "LOWER" switch until the Truck Leveler is fully lowered.

NOTICE
Upper door closes when releasing the Truck Leveler.

DéDAUNGER
Arc Flash and Shock Hazard
PPE [Personal Protective Equipment] Required.
Do not open unit while working on or near it.
Do not open unit while connected to power.
Do not use unit in wet or highly flammable environments.
Properly trained personnel only.

LIMITED WARRANTY

4Front Engineered Solutions, Inc. warrants that this truck leveler will be free from defects in material and workmanship under normal use for a period of one (1) year from the earlier of 1) 60 days after the date of initial shipment by 4Front Engineered Solutions, Inc., or 2) the date of installation of the truck leveler by the original purchaser, provided that the owner maintains and operates the truck leveler in accordance with this Owner’s Manual.

In the event that this truck leveler proves defective in material or workmanship within the warranty period, 4Front Engineered Solutions, Inc. will, at its option:

1. Replace the truck leveler, or the defective portion of either, without charge to the owner (excluding any cost of removal or reinstallation which shall be the sole responsibility of the original purchaser); or

2. Alter or repair the truck leveler, on site or elsewhere, without charge to the owner.

This warranty IS EXCLUSIVE AND IT IS IN LIEU OF ANY OTHER GUARANTEES OR WARRANTIES, EXPRESS OR IMPLIED. THERE ARE NO WARRANTIES, EXPRESS OR IMPLIED, WHICH EXTEND BEYOND THE DESCRIPTION ABOVE AND THERE IS NO WARRANTY OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. 4Front Engineered Solutions, Inc. sole warranty obligation with regard to this truck leveler shall be as set forth above.

This warranty does not cover any failure caused by improper installation, abuse, negligence, or failure to properly maintain and adjust the truck leveler. Parts requiring replacement due to damage resulting from vehicle impact, abuse, or improper operation are not covered by this warranty. 4Front Engineered Solutions, Inc. disclaims any responsibility or liability for any loss or damage that results from the use of unauthorized replacement parts or modification of the truck leveler.
Please direct questions about your Truck Leveler to your local distributor.
